## F INTERSHIPS AND PROJECTS

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Projects | <b>Web development</b> ( Duration May2025 - September 2025 ) I've built a basic Urban Microclimate Analyzer web page that Lets users enter a city name to analyze urban heat island effects. • Uses JavaScript to display sample microclimate data (temperature, humidity, UHI index, etc.). • Has a clean HTML structure with header, input, results section, and footer. • Links to an external CSS file (climate-analysis.css) for styling. • Organized files neatly in folders, ready for further development or backend integration. Great start for a climate-focused web project! Skills used - HTML,CSS,Javascript. |
